BLACKSHEEP POWER

INFINITE POSSIBILITIES IN EVERY PARTICLE

OUR SERVICE

- Microparticle feasibility studies
- Nanoparticle feasibility studies
- Microfluidic process concept development
- Life science application development
- Microfluidic proof of concept testing
- Microfluidic instrument development

OUR PROJECTS

Next-generation microparticle-based therapeutic development

Payload, polymer and carrier compatibility testing; particle maturation and enrichment process development

Flow chemistry solution for macromolecule separation media

Concept development and performance testing of flow-based approach

WHAT WE OFFER

Multidisciplinary engineering team turn concepts from the lab into viable products and processes.

Highly specialised skills in microfluidics and particle production coupled with expertise in:

- ✓ Chemical engineering
- ✓ Nanotechnology
- ✓ Material science
- ✓ Biochemistry
- ✓ Cellular and molecular biology

WHY CHOOSE US

- Cost effective provision of world-class expertise
- Consultative process of experimental design and execution
- Flexible project design with rigorous management
- Exuberant and energetic team with experienced leadership
